OUTNUMBER MICHIGAN STUDENTS

2,430,000 TO **1**

IN THE TYPICAL CLASSROOM

These invisible critters can literally run students out of class. Dust mites trigger asthma symptoms during school making it difficult, sometimes impossible to learn. Among those who reported at least one asthma attack in the previous year, children 5-17 years of age missed 14.7 million school days due to asthma nationally

Have you worked to reduce all the triggers in your school?
